

WATER USE

Chapter 281 of the Wisconsin Statutes requires annual reporting to the Wisconsin Department of Natural Resources of monthly withdrawals from all wells and surface water withdrawal systems capable of supplying water at a rate of 100,000 gallons per day or more. This includes water uses such as public supply systems, energy production, paper manufacturing and agricultural irrigation. The reported water use data is spatially located, which allows for DNR to provide customized water use information to specific locations, withdrawal types and water uses. These annual water use reports improve our understanding of spatial and temporal trends in water withdrawals.

The [2018 Water Use StoryMap](#) showed that the largest category of groundwater withdrawals was municipal public water supplies (DNR 2019). The second largest category of groundwater withdrawal in the state was agricultural irrigation. Agricultural irrigation water use varies from year to year depending on the timing of rainfall during the growing season.
